LAB 05 – JASPREET SINGH

LAB CORRECTIONS

1. <https://jsingh31-lab.github.io/IST363/week04/Lab04/OrangeNews.html>

WARMUP

You may not use artificial intelligence to answer the questions below.

2.
 - a. The purpose of the .navbar-toggler is to have a button that is on the web page that allows you to open and close the nav menu when on a small screen or mobile view. The purpose of collapse is to hide or show the nav items when they are toggled. Align nav items to right can use .ms-auto.
 - b. The size options for buttons is large or small and they are applied by using .btn-lg or .btn-sm. In html it would look like this:
 - i. `<button type="button" class="btn btn-secondary btn-lg">Large button</button>`
 - ii. `<button type="button" class="btn btn-secondary btn-sm">Small button</button>`
 - iii.
 - c. Gutters in bootstrap are the padding/spacing between the columns in Bootstrap grid system. The default behavior is horizontal gutters and vertical gutters. Block buttons are buttons that span the full width of the parent container. You can use a block button when working with having form submission buttons, mobile-first designs or CTA buttons for a single prominent button to be the main focus on page.
