LAB 04 – JASPREET SINGH

LAB CORRECTIONS

1. <https://jsingh31-lab.github.io/IST363/week03/Lab03/lab03.html>

WARMUP

You may not use artificial intelligence to answer the questions below.

2.
 - a. The utility classes in Tailwind replace the writing custom CSS styles because the CSS is being implemented directly into each segment of the HTML code rather than having an external style sheet linked to the page.
 - b. `<div class="flex items-center justify-center">`
 - c. Need to extend the Tailwind's default theme inside `tailwind.config.js`. For instance, `module.exports = {`

```
  Theme: {  
    Colors: {  
      Newcolor: #C0C0C0,  
    }  
  }  
};
```

To use in html would require you to do this in Tailwind code

```
< _ class="insert Tailwind code">NewColor</div>
```

- d. Must use the `@apply` in the SCSS to help combine the Tailwind classes.
